

Upper Thames River Conservation Authority
Embro Dam
Class Environmental Assessment

PUBLIC INFORMATION CENTRE – COMMENT FORM

Upper Thames River Conservation Authority (UTRCA), through their consultant Ecosystem Recovery Inc., is undertaking a Class Environmental Assessment (Class EA) for the Embro Dam in the Township of Zorra. The UTRCA commissioned a Dam Safety Review (DSR) of the Embro Dam which was completed in 2007. The DSR identified issues with the spillway capacity and embankment stability of the dam. This Class EA study was initiated to assess the existing site conditions and constraints, and to develop potential alternatives to address the identified issues at the dam.

The project will be carried out under the *Conservation Ontario Class Environmental Assessment for Remedial Flood and Erosion Control Works* document.

Public consultation is a key component of this study. Although the study is in an early stage, the project team welcomes public input and comments, and will incorporate them into the planning and design of this project. Please provide any comments in the space provided below.

Good visual exhibits + clear powerpoint.
Difficult to manage some questions but speakers
remained polite + informative.
Thank you.
Perhaps draw eg. of Woodstock Pond where residents opposed
suggestion to drain + pond + authorities listened - The pond remains.

Thank you for your participation.

Would be better served to restore creek to original condition. Brook trout are resident above Embro Pond. Thames River Anglers Hatchery has raised and reintroduced them. Downstream of the pond supports some brook trout but no reproduction takes place due to water quality + temperature. Removing the pond would remedy this.

Thank you for your participation.
