

The Environmental Assessment for the Embryo Dam, in the Embryo Conservation Area, is intended to address safety concerns identified as part of the Dam Safety Assessment (ACRES, 2007) including structural integrity, hydraulic capacity, insufficient freeboard, embankment slope instability and inadequate conveyance capacity for flood flows through the emergency spillway. Through the study, potential alternatives will be evaluated to determine a course of action to mitigate dam safety concerns.

The project is being carried out in accordance with the requirements of the *Conservation Ontario Class Environmental Assessment*. The study is being undertaken by the Upper Thames River Conservation Authority (UTRCA) in partnership with the Township of Zorra.

Public consultation is a key component of this study. This Public Information Centre (PIC) is held to receive public input on the preferred alternative for the Embryo Dam. Any feedback and comments provided will become part of the public record for this project.

Please provide your comments regarding the preferred alternative.
