

Large Stock Trees for Tree Planting on Private Lands Program Spring 2025

The Upper Thames River Conservation Authority (UTRCA) offers a tree planting program for landowners with a minimum of 1 hectare (2.5 acres) within the Upper Thames River watershed.

Planting projects include windbreaks, retiring highly erodible land, treed buffer strips along watercourses, and areas of your property where you would like to add diversity and create habitat.

Trees purchased through this program may be planted through the UTRCA's full planting service or by the landowner. See below for details on both programs.

Choose from a variety of coniferous and deciduous trees and wildlife shrubs. Species and quantities are subject to availability from the nurseries -- please contact us in the fall for the best selection. While tree survival cannot be guaranteed, the UTRCA takes every precaution to ensure the trees are received in the best condition possible.
